Project title: A model of sustainable economic development (KT.08.06)

Code: KT.08.06
Coordinator: MA. Nguyen Huu So, MA. Vu Thuy Anh
Implementing institution: University of Economics and Business, VNU.
Duration: From 6/2008 to 6/2009
Objectives:
The research report reviews literature on the world’s major issues of sustainable economic development; studies a number of models as well as experience of some countries including Vietnam in implementing different modes of economic development. This serves as a basis for pointing out the features which should be taken into consideration in order to fast and effectively build a model of sustainable economic development for Vietnam.

Main contents:
The report both overviews and develops the notion of sustainable economic development in the current Vietnamese context and based on a number of models of economic development in some selected countries. The report compares these models with that of Vietnam; critically evaluates the past activities towards sustainable economic development, which serves as the ground for drawing experience and highlighting guidelines and measures for attaining the goal of building a model for sustainable economic development and initiating sustainable economic development for Vietnam.

Results obtained:
